

CLEANING & MAINTENANCE INSTRUCTIONS

The following cleaning and maintenance instructions are for Recessed products.

General:

- ➤ During the winter season, remove product and clean rails once per week. During other seasons, once per month should be sufficient.
- ➤ Debris between the rails should be removed during the cleaning process. Each time the rails are cleaned, make sure there is no debris underneath in the recess; this will prevent product from warping due to an uneven substrate and prevent long-term problems. (Vacuuming is the most effective method for this cleaning.)
- ➤ If the units are above a drain, ensure that nothing is blocking the water flow to the drain.
- ➤ Never apply wax or other polishing products to the surface of the units; this would create a potential hazard.

Specifics:

- ➤ Clean aluminum surfaces with soap and hot water, then allow mat to dry.
- ➤ If applicable, periodically clean carpet and scraping inserts with a hot water extraction machine to remove soil and restore pile.
